ASTi SOFTWARE MAINTENANCE

Reduce life cycle costs and keep your training systems up to date with ASTi software maintenance.

The latest ASTi software and operating system (OS) updates every quarter.

+

Information Assurance (IA) security updates.

PROGRAM BENEFITS

In addition to the latest version of ASTi software, you'll get:

- Software re-host to new hardware at no additional software cost
- Free upgrades to the next generation of ASTi software; requires a software maintenance contract through the full program life cycle
- Priority return, evaluation, and repair status
- OS updates
- Optional embedded product support services

TELESTRA CUSTOMERS

- New/updated modeling components (comms, aural cue, control, etc.)
- Level D and sound tuning improvements (expedited tuning, remote tuning, etc.)
- API and interface enhancements

VOISUS CUSTOMERS

- New/updated radio skins
- New/updated hardware radio panels, and radio bridging hardware support
- New/updated software clients for new versions of the OS and serious games
- API and interface enhancements

TYPES OF UPDATES

Improvements common to all ASTi products include:

- LVC standards compliance updates (SISO, DIS, HLA, CAF DMO, NCTE, etc.)
- Interoperability compliance w/ latest industry standards (iSCSI, diskless, CAC, etc.)
- CPU, loading, user interface and diagnostics optimization and improvements
- Support for latest server deployment (ASTi hardware, CFE/GFE, virtualized) and audio I/O distribution hardware
- Communications fidelity enhancements in radio modeling, jamming, crypto, etc.
- Bug fixes and stuff... nobody's perfect
- New feature requests for possible inclusion in a future software release

NOTE Hardware, development, and program-specific support are not covered by the software maintenance option.

Future-proof your investment.   **GET STARTED AT ASTI-USA.COM**

ASTi IA SECURITY

ASTi has a proven, long-term commitment to safeguarding sensitive and classified information.

The latest ASTi software and operating system (OS) updates every quarter. **+** **Information Assurance (IA) security updates.**

ASTi develops and maintains a complete spectrum of security and information assurance (IA) solutions. All ASTi products are built upon a solid security foundation and meet numerous government accreditation standards, such as Host Based Security System (HBSS) compliance. As our systems are authorized under the NIST Risk Management Framework (RMF), rest assured that ASTi has your systems covered today and in the future.

RMF APPROVED

ASTi products are accredited with Authority to Operate (ATO) status in compliance with the NIST RMF. Contact ASTi for more information.

GOVERNMENT ACCREDITATION

Additional IA statements and approvals are available for Certificate of HBSS Compliance, TEMPEST Countermeasure Review (TCR), RoIP Cross Domain Solution (CDS) Determination, Emission Security (EMSEC) Determination, and Certificate Of Networthiness (CON).

HARDENING SCRIPTS & PATCHES

ASTi's IA scripts and patches eliminate all DISA high- and medium-severity vulnerabilities. The simple installation process relieves system administrators of difficult, time-consuming IA management chores, freeing them to perform other critical tasks.

CLEAR & HELPFUL REPORTS

ASTi processes the raw STIG, SCAP, and scan reports for easy analysis. These reports break outstanding Potential Discrepancy Items (PDIs) into lists of open, false-positive, and waiver items.

IA MAINTENANCE

ASTi's IA Maintenance program is the ideal solution for customers requiring rigorous IA controls, conformance to DoD standards, and OS patch management throughout the product's life. IA Maintenance is bundled with Software Maintenance, which also includes the latest ASTi software features and fixes.

Secure your investment.
